

Foodservice Produce Trays

Introducing fruit and vegetable trays that keep products fresher, make back room preparation faster and make your product more flavorful.

Fresh, fast, flavorful. The winning ingredients for foodservice produce trays and customer satisfaction.

Taste, consistency and efficiency are key to high-performing foodservice operations.

Any technology that helps deliver a fresher, better tasting product, while reducing backroom labor and minimizing costs, can also deliver a real competitive advantage for foodservice operations. To help customers meet these challenges, Sonoco has developed a versatile portfolio of foodservice produce trays for pre-sliced and diced products designed with protection and productivity in mind.

Sonoco's steam table trays for produce:

Superior tray designs keep produce fresh and firm while enhancing packaging throughput.

Why settle for standard produce trays when you can get better protection and competitive pricing from Sonoco's foodservice produce trays? Sonoco produce trays are available with a LDPE or PP seal surface in black and white. Logos can be included for branding and custom inserts for enhanced product protection and freshness. Heavy-duty construction allows our trays to stand-up to the humidity and handling found in restaurant environments.

Build your brand and your bottom line.

Our trays will protect your brand reputation and reinforce customer loyalty by delivering fresher products. In addition, our strong, low temperature seals result in faster throughput on packaging lines. The net result is a winning combination that delivers a better product and a more efficient production operation that builds your brand and your bottom line.

Quarter steam table trays:

A cost-effective way to maximize product protection, extend shelf life and reduce waste.

Sliced tomatoes are extremely delicate and therefore vulnerable to damage. Given the tight margins around food costs for foodservice operations, reducing waste is a key ingredient to raising profitability. Sonoco's thermoformed plastic quarter steam table trays are specifically designed to protect sliced tomatoes, promote extended shelf life and save money by delivering more sellable products and less food waste.

Our unique design features a seamless, concave inner wall profile that reduces pressure points. This helps prevent flat slices and edge damage that make produce visually unappealing and shortens shelf life. The tray delivers superior fluid handling, allowing up to 80 ml. of fluid to flow away from the produce while keeping slices firm and flavorful. By combining high-strength, low-temperature seals, our trays improve line run rates, delivering operational productivity and efficiency.

Half steam table trays:

A heavy-duty solution for keeping thicker cuts in prime condition.

Sonoco half steam table produce trays are specifically engineered with smooth, curved interior walls to reduce pressure points and channel fluids away from the produce, keeping it fresh, flavorful and visually appealing. The half steam table trays are available with an optional drain insert that keeps up to 250 ml. of fluid away from the produce, maximizing shelf life. For added liquid control we can also provide an absorbent pad under the insert that locks the liquid in and enhances the quality of your product.

So, if you're in the market for a cost-effective solution that delivers freshness, convenience and quality for your pre-sliced fruits and vegetables, let's talk.

Our foodservice produce trays can help you take a bite out of your operational costs and help you build a relationship with your customers that keeps them coming back for more.
